## A Very Brief Analysis of Cumulative Voting in the Amarillo ISD in 2004

This table indicates how many voters cast how many votes on each ballot. You will note that 97.5 percent of ballots had the maximum four votes. Only .1 percent failed to vote for any Board of Trustees candidate. At 1.3 percent, there were very few overvotes. The overvotes will not be considered for further analysis.

The following tables present information about each candidate. For example, the "Smith Total Votes" table presents data on how each of the ballots was marked for Pete Smith. A little over 41.3 percent of the voters did not vote for Smith. About 38 percent gave him one vote. The remainder of the voters "plumped" their vote for Smith. He received two votes from 13.6 percent of the voters. He received 3 votes from 1.6 percent of the voters. A little over 5 percent of the voters awarded him all four of their votes.

James Allen (data presented in table below) received the most four-vote ballots at 7.7 percent. He received 2,149 votes total. While additional research is necessary to determine if certain precincts supported Allen at different levels, I "felt" that there were differences while I was typing the data into my computer.

Smith, Allen, Carlisle, and Pitner were elected. Probably the best predictor is to look at the number of zero-vote ballots. Those who were not elected have higher percentages of zerovote ballots.
